

## After changing to a storage charging station I can no longer afford it

Are public charging stations worth it?

Public charging stations are essential for longer trips or for those without access to home charging. Public charging costs can vary widely. Some locations offer free charging, while others charge a fee. With over 30 networks providing charge points, payment methods can include contactless or app-based systems.

Where can I charge my car without a car charger?

For those without access to home charging or on longer journeys, public charging stations are a lifeline. Another option is to charge your car at a public charging point. They are located across the country, and you can use this map tool to find your closest.

Should I charge my eV at home?

Despite the rising energy costs, charging your EV at home remains the cheapest option. Several factors will affect your home charging costs: Your car and its battery size: Naturally, larger batteries will be more expensive to charge. The type of charger you have: The charger type can influence both the speed and cost of charging.

Is home charging a good idea?

Home charging is not just about convenience; it's also the most cost-effective way to keep your EV's battery full. It's like having a personal gas station right in your garage or driveway. One of the many benefits of an electric car is how cost-effective and easy it is to charge from your own home.

Why is it so expensive to charge a car battery?

Your car and its battery size: Naturally, larger batteries will be more expensive to charge. The type of charger you have: The charger type can influence both the speed and cost of charging. How you charge: Your charging habits, such as how often you charge and whether you fully charge or just top up, will impact costs.

What is the transition to EVs & EV charging infrastructure?

The transition to electric vehicles (EVs) is a crucial step towards achieving the UK's net zero target. This guidance provides information on EVs and EV charging infrastructure. While a new electric vehicle (EV) costs more to buy up front, today most drivers in the UK (around 80%) will buy their cars on the used market.
