

How do I know if my EV battery fuses are good?

Check the contactor-fuse coordination for normal operation, overloads and failure currents. The fuses in a battery pack protect the battery and the other electrical components against high currents. There are special off-the-shelf components similar to 12V starter battery fuses. However, EV fuses are rated for high voltage and traction currents.

How to choose a battery protection fuse?

The battery protection fuse is there to protect the main battery cable so you should choose a fuse with Ampere rating higher than the maximum possible current of your system and less than the current rating of the cable. It is NOT determined by the battery BMS continuous current rating (this is a characteristic of the BMS not your system).
