

What is the test voltage for a 500 pF capacitor?

For explosives testing a 500 pF capacitor discharged through 5,000 Ohms is specified in such standards as Mil Std 322B -1984, Mil Std 1512 -1972 and Mil Std 1576 -1984. The test voltage is specified at 25 kV. Depending upon the specific standard used the ESD pulse is applied to pin -to -pin and to pin -to -case.

Can a 25 V 0805 chip capacitor withstand 26 kV of ESD?

As can be seen, a common 25 V 0805 chip capacitor in this series can withstand 26 kV of ESD. To understand the protection principle behind using these capacitors, consider the typical ESD test circuit shown in figure 2 for the human body model.  $R_c$ ,  $C_d$ , and  $R_d$  are specified by the test standard.

How many kV can a X7R capacitor withstand?

Examples of X7R devices are shown in table 1. As can be seen, a common 25 V 0805 chip capacitor in this series can withstand 26 kV of ESD. To understand the protection principle behind using these capacitors, consider the typical ESD test circuit shown in figure 2 for the human body model.

Which capacitor has the highest leakage current?

Internal leakage current leads to a continuous voltage drift that discharges the cell. Capacitor C1 with the lowest leakage resistance has the highest leakage current. It causes the highest loss in voltage (about 850 mV). In comparison, the total voltage-loss of the stack is about 1 V after 6 h.

What EDLCs are used in a Gamry instruments potentiostat?

The data shown in this note were recorded on a Gamry Instruments potentiostat using Electrochemical Energy software. Tests were run with commercial 3 F (P/N ESHSR-0003C0-002R7) and 5 F (P/N ESHSR-0005C0-002R7) electric double-layer capacitors (EDLCs) from Nesscap.

What happens if a capacitor stack is unbalanced?

Unbalanced stack with different capacitances Using capacitors with different capacitances in a stack leads to fluctuations in voltage defined by Equation 7. Applying a constant charge  $Q$  on a stack leads to a lower voltage  $V_i$  for single cells with higher capacitance  $C_i$ .
