

# How to make home solar power supply brighter

How to make a solar panel brighter?

The efficiency of charging and therefore extended brightness is enhanced with the best direction of light into the panel. A reflector can be created from aluminum foil or even anything painted white paint. The bigger the surface area of reflector, the better as long as it points the light into the panel.

How do you light a solar panel?

If your panel is on a dark wall which soaks up the precious commodity of light the most, consider adding a reflector around it that bounces the light back towards the panel. Think about channeling light into the panel as if it is like adding fuel to a car. Spraying gas all over the car will see very little go into the tank, so it is with light too.

How do I make a batter holder for a solar light?

If you need to create your own batter holder for the solar light, take two springs and glue them into place as a normal battery configuration would be laid out. Cut a square in the top of your panel or decide where the light will be reached. Usually it is on the top of your light for direct sun exposure. Reconnect all and leave out to charge!

How do you make a solar light holder?

Gut the circuit and remove any unnecessary plastic so more light is reaching your battery and panel. If you need to create your own batter holder for the solar light, take two springs and glue them into place as a normal battery configuration would be laid out. Cut a square in the top of your panel or decide where the light will be reached.

How to rig a solar light?

Most of the cheaper solar lights will be around 2-5 volts which is very low. The steps to rig your device and make your solar light shine brighter from the inside out goes as follows: Take the device apart and disconnect everything. Yes, everything. Notice the battery size and replace it with a battery that is higher-double its mah/volt power.

How to make a dim light look brighter?

They ought to appear brighter. If some lights are brighter than others, it could be the lids that cover them at the angles they do. In this case, grab the dim lights and turn it 180-degrees. This step should be the fun one as well because your light should be shining brighter for you to be enjoyed.
