How do I install a photovoltaic system?

Follow along with the essential steps of photovoltaic systems installation, from mounting solar modules and connecting to the grid, to commissioning and regular maintenance for optimal performance.

What are the components of a solar photovoltaic system installation?

There are the main components of a solar photovoltaic system installation: Solar panels(photovoltaic modules) are the heart of any solar system installation. These panels convert sunlight directly into electricity and are typically made up of a series of interconnected silicon cells.

How does a solar panel installation work?

Mounting the panels: The installers will begin by securing mounting brackets to your roof or the ground (if it's a ground-mounted system). The panels will then be securely attached to these mounts. - Electrical wiring : After the panels are mounted,the electrical wiring will be connected to the inverter and electrical panel in your home.
