

Why is the cycle life of SLI lead acid batteries important?

Thus,improving the cycle life of the SLI Lead-Acid batteries ensures a better service to the consumer with solely providing all the power needs of a vehicle. Currently,most of the commercially available Lead-Acid batteries fail after a while like any other type of the battery.

What is Nam in lead acid batteries?

NAM in Lead-Acid batteries consists of two parts; interconnected network of lead crystals,known as skeleton network,and separate lead crystals deposited on the skeleton network,known as energetic structure. These two components play an important role in energy storage of the negative pole of the Lead-Acid battery.

What is a rechargeable lead acid battery?

Rechargeable Lead-Acid battery was invented more than 150 years ago,and is still one of the most important energy sourcesin the daily life of millions of peoples. Lead-Acid batteries are basically divided into two main categories : (1) Starting-Lighting-Ignition (SLI) batteries,and (2) deep cycle batteries.

Do lead-acid batteries improve cycle life?

Three folds improvementwas obtained in cycle life of the Lead-Acid battery. Because of their commercial acceptability,Lead-Acid batteries are of significant importance,thus researchers constantly attempt to find new approaches to enhance their efficiency.

What is a deep cycle lead acid battery (VRLA)?

One subcategory of the deep cycle Lead-Acid batteries is Valve Regulated Lead-Acid battery(VRLA),in which the plates are wrapped around with porous absorptive glass mat (AGM) separators and compressed to a definite pressure.

What is a lead battery consortium?

to support innovation in advanced lead batteries.The Consortium identifies and funds research to improve the performance of lead batteries for a range of applications from automotive to industrial and,increasingly,new forms
