For example, a high-MFD, high-voltage, dual-run capacitor from a leading brand will naturally cost more than a low-MFD, low-voltage, single-run capacitor from a generic manufacturer. Also, the technology used in the capacitor design can greatly affect price, with more advanced design and production processes typically reflecting higher price.

Wide range in voltage levels from 240 to 1000 V. Capacities from 30 to 1200 kvar. Operation in ambient temperatures from -25 °C to 50 °C. Long life cycle due to high quality low losses components and sturdy designed to work constantly at 80 °C operation temperature.
