SOLAR PRO. Application of aluminum foil in new energy batteries

What is battery aluminum foil?

The battery aluminum foil satisfies the four requirements of plate type, trimming, performance and surface treatment for new energy vehicles. The electric source of the electric vehicle is a lithium battery, and the generated voltage drop drives the external load to make the car run.

Can aluminum foil be used to etch a lithium ion battery?

The latest research in the lithium-ion battery industry has found that by etching and roughening the surface of the aluminum (Al) alloy foil used as the positive collector of the lithium-ion rechargeable battery, the charge and discharge characteristics of the battery can be improved.

What is the cathode foil in the power battery for new energy vehicles?

The cathode foil in the power battery for new energy vehicles is processed by high-end aluminum foil. The battery aluminum foil satisfies the four requirements of plate type,trimming,performance and surface treatment for new energy vehicles.

How does aluminum foil affect battery performance?

The amount of use, in turn, results in a significant increase in the overall performance of the battery. At present, the lithium aluminum foil supplied by the aluminum foil supplierhas various alloy grades such as 1060, 1050, 1145, and 1235, and has -O, H14, -H24, -H22, -H18, etc., and the thickness ranges from 10 to 50 micrometers.

Will lithium battery aluminum foil be available in 2021?

Industry insiders predict that the global demand for lithium battery aluminum foil will be about 192,000 tonsin 2021, an increase of 45%. The existing production capacity may be in short supply. The supply and demand gap will increase to 11,000 tons in 2022, and it will continue to expand in 2023. So what is battery aluminum foil?

Can you use aluminum foil for lithium batteries?

Rolling ordinary aluminum foil with a thickness ranging from 10 to 50 microns can be used to obtain battery aluminum foil for lithium batteries. Commonly used pure aluminum foils for lithium batteries have various alloy grades such as 1060,1050,1145,1235,etc.,and are in -O,H14,-H24,-H22,-H18 and other states.
