

How do I charge a car battery?

Turn on the charger: Some chargers will turn off automatically when the battery is charged, but others will need to be disconnected. Check the manual for your individual charger to find out how long it will take to charge a car battery and what you need to do.

How to charge a battery?

In general, the following applies for charging batteries: It is essential that you check the open-circuit voltage with a battery tester or voltmeter. Please make sure to recharge the battery as soon as an open-circuit voltage limit of 12.5 V has been reached.

How do I connect a battery charger?

Connect the charger: Keep the charger as far from the battery as the cables will allow, and never leave the charger on top of the battery while it's charging! Connect the clamps of the charger to the terminals on the battery, matching positive to positive and negative to negative. Then, plug the charger in.

How long does it take to charge a battery?

The charging time will depend on the charger and the condition of the battery. It can take several hours to fully charge a depleted battery. Once the battery is fully charged, turn off the charger and unplug it from the power outlet. Following this, you will need to disconnect the charger clamps from the battery terminals.

How does the accucharger work?

The Accucharger automatically charges the battery with the recommended charging current. During charging, the temperature of the acid must not exceed 55 °C. If this is exceeded, you must stop charging the battery. Display of battery charge in percent. When the battery charge is at 100%, it automatically switches to charge retention mode.

How do I charge the accucharger?

Connect the Accucharger to the 230 V socket. Do not switch on the charger until the battery has been connected. We recommend a charging current of one tenth of the capacity (e.g. 44 Ah /10 = 4.4 A charging current). For automatic chargers, such as the Banner Accucharger, this is set automatically.
