

Battery damaged by adjustable power supply

How do you charge a battery pack with a power supply?

Set the voltage: Adjust the power supply to the correct voltage for your battery pack. Set the current limit: Configure the power supply to the appropriate charging current (0.2C to 0.5C). Monitor the charging process: Use a multimeter to confirm the voltage and current.

Can a power supply charge LiFePO4 batteries?

A power supply is an electronic device that delivers regulated voltage and current to an electrical load. Unlike standard chargers, power supplies are highly adjustable, making them ideal for charging batteries with specific needs like LiFePO4. Why use a power supply to charge LiFePO4 batteries?

Will a dead battery affect the power supply?

It is very unlikely that the dead battery will affect the power supply as when they die they tend to go open circuit not short circuit. It is even more unlikely that it would affect the laptop. If you have had no problems so far then you can continue with what you are doing. Nope it won't damage the Power cord.

Can a DC power supply provide a fixed current?

With a typical adjustable DC power supply, I can set the current (typically a mode called I-Set) to provide a fixed current by controlling the voltage. When testing a battery, can I do this in reverse?

Can a power supply equalize a lead acid battery?

You can also use the power supply to equalize a lead acid battery by setting the charge voltage 10 percent higher than recommended. The time in overcharge is critical and must be carefully observed. (See BU-404: What is Equalizing Charge) A power supply can also reverse sulfation.

Why do I need a power supply?

A power supply allows you to manually set the voltage and current to match the specific requirements of your battery. This approach is helpful for: Custom setups: When you need precise control over the charging process.

\$begingroup\$ @Coriolanus A fuse at the battery ensures that shorted wires anywhere, including shorts in the power supply or other malfunctions - such as shorted pass element in the supply - will blow the fuse and cause no further damage. A diode will dissipate more than a fuse, and it increases the output impedance of the supply.

If you don't know the charge amperage, which could be hard to figure out you could overheat the pack. Looking at my dewalt charger and battery it looks like the charger is doing the balancing of the cells not a battery management card within the battery pack itself. Which also means charging it with a bench power supply won't work well.

This way I can make one battery powered power supply to run many different types of LED's. I have found this design and would like to modify it for my project. ...
