

How can a clear pricing strategy help power battery recycling enterprises?  
A clear pricing strategy for power battery recycling can curb the phenomenon that irregular small workshops take vicious bidding to recycle batteriesand help power battery recycling enterprises to make clear pricing strategies between the upstream and downstream enterprises of closed-loop supply chain.

Are electric vehicle battery echelon utilization and remanufacturing a closed-loop supply chain?  
This study examines an electric vehicle battery closed-loop supply chain including a battery manufacturer and a retailer, with a focus on echelon utilization and remanufacturing of waste electric vehicle battery. Optimal pricing strategies and technological effort decision of the supply chain members are derived based on a Stackelberg game model.

What is a power battery enterprise?  
Power battery enterprises collect the used power batteries directly from customers and remanufacture them or consider echelon use batteries (Model E). (Jia & Li, 2019) Model E takes both echelon utilization and government subsidies into consideration.

Are enterprises involved in the Cascade utilization of power batteries?  
Our study focuses on enterprises involved in the cascade utilization of power batteries, examining the timing and pros and cons of government EPR policy implementation, as well as optimal pricing decisions for supply chain members. The findings provide valuable insights for the operations of relevant enterprises and government regulatory design.

Which Pricing Decision models are established under a battery closed-loop supply chain?  
Three pricing decision models are established under the recycling model of the battery closed-loop supply chain are established in this paper: benchmark model, EPR regulatory model disregarding cascade utilization, and EPR policy model under cascade utilization.

Why is a closed-loop supply chain important for electric vehicle batteries recycling?  
It significantly provides a theoretical basis for the enterprises in the electric vehicle batteries recycling closed-loop supply chain to formulate pricing strategies under three recycling modelsand provides suggestion for the government in the designing power battery recycling subsidy policy.

Speaking on the sidelines of the e-mobility event MOVE 2024, which took place in London from June 19-20, several industry experts agreed that spot price volatility recently observed in several critical raw materials has prompted the adoption of holistic strategies to mitigate price risk while electric vehicle (EV) ecosystems are being built in western countries.
