That way you will minimize the deformation to the battery. iPhone 5c Logic Board Replacement. iPhone 5c Lightning Connector Assembly Replacement. The iPhone 5C has tiny surface mount components near the edge of the logic board near the battery connector. If you pry the battery from there, you can easily knock

some components off the board.

Before you nuclear, try the tabs again. Look at the bottom of the battery towards the charge port for the white adhesive. If you can grab it with tweezers, you can SLOWLY pull ...

I then removed the battery and connector again (with the plastic part still plugged onto the battery, and carefully placed a drop of superglue to the bottom of the detached connector. I then replaced the battery and connector assembly onto the motherboard again, screwing in into place.

Just on battery connections: It won't hurt the battery (other than dirtying the contacts) but it won't work very well. To make good electrical contact, you need pressure pushing the two metal surfaces together. Get an ordinary plastic battery holder with built-in springs for the 1.5V cells, and a snap for the 9V, and you will get good consistent electrical contact.

Thats not such a big deal but I'd be more concerned that if the holder is broken it could potentially short something randomly if the leads are loose. ... Solder an inline battery holder to the contacts in the broken one. Actually trickier in some ways because the holder is plastic. ... Whether its electrical tape, hot glue, or the best option ...

Hi, Today I detected that one release button on one of my batteries does not spring back into its default position and on close examination I found a crack in the plastic, see photo. Have tried to stabilise it with a drop of ...

I was working on an old p3 system and managed to snap off the CMOS battery retaining clip. Now it just falls out if the box is vertical. ... broken CMOS battery retaining clip - how to fix??
