

When will electric vehicle batteries be made in Latvia?

Published: 25.03.2022. Swedish tech company Anodox Energy Systems has announced plans to produce electric vehicle batteries in Latvia, with the first factory in the Port of Riga expected to be operational by December 2022. A second factory for rapidly growing LFP cell technology will be established soon after.

Where will the battery production cycle be completed?

"This means that the battery production cycle will be completed in Latvia, from raw material to complete system. From Riga the finished products will be delivered to customers in Scandinavia, Germany and the rest of Europe. A truly strong demonstration of our commitment to bring Latvia to the forefront of automotive technology."

Why did anodox energy systems open a factory in Riga?

"We are very glad that Anodox Energy Systems decided to open factories in Riga. This will bring investment, jobs, and income to the city as well as assess the attractiveness of opportunities that our city offers by ensuring that Riga is competitive in attracting new high-growth companies.

How much will Riga invest in LFP cell technology?

A second factory for rapidly growing LFP cell technology will be established soon after. A total of EUR50 million will be invested and up to 300 new jobs will be created. This announcement aligns with Riga's effort to establish Latvia as a European hub in the global automotive value chain.

Who makes the best cars in Latvia?

Latvia-based companies such as Bucher Municipal, LEAX Rezekne, LAS-1 company, LEAX Baltix, Dinex Latvia, EMJ Metals, SFM Latvia, Metaro, Defense Partnership Latvia and LANOS all currently have products in many of the world's best cars. Janis Vitenbergs, Latvia's Minister of the Economy:

Why did anodox choose Latvia?

Anodox has selected Latvia as an ideal location to establish their factories based on its location, automotive ecosystem, and government incentives. Theodore Zannakis, Anodox CEO: "We are thrilled and grateful to announce our entry into Latvia and the establishment of the first LFP factory in Europe.

drive the battery equipment market. In 2023, the Asia-Pacific region maintained an 88.6% share of the battery manufacturing equipment market and amassed \$18 billion in value - a feat achieved because of China's huge production base (making up 89.2% of total global production). China is still expected to account for 75% of global

In Latvia, developer Utilitas Wind announced the official opening of a 10MW/20MWh battery energy storage system (BESS) last week (1 November) in Targale, a village in Latvia's north-eastern Ventspils region.

We have been a leading supplier of innovative and efficient production equipment for the manufacturing of lithium-ion battery cells for many years. With our machines and systems, we cover all key process steps along the battery cell ...

Latvia is the starting location for Anodox to establish production facilities across Europe. According to the company's plan, Anodox Energy Systems is also considering Germany, Greece and Luxembourg as potential investment ...

4 ???· As a result, battery manufacturers are forced to rely on imported raw materials. China and Hong Kong are the main suppliers of India's lithium-ion battery industry, which is mostly dependent on imports. China controls a sizable portion of the world's production and processing of vital minerals.

Bühler's lithium-ion battery (LIB) manufacturing solutions cover crucial process steps. They include wet grinding active materials and precursors plus a continuous twin-screw electrode slurry mixer, designed to reduce costs in ...

The project is integrated with Targale Wind Park, a 58.8MW wind power plant that went into commercial operation in 2022. The battery storage system will be connected to the transmission grid this autumn and will ...
