

How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

How do I design a photovoltaic system?

The first step in the design of a photovoltaic system is determining if the site you are considering has good solar potential. Some questions you should ask are: Is the installation site free from shading by nearby trees, buildings or other obstructions? Can the PV system be oriented for good performance?

How to design a solar PV system?

When designing a PV system, location is the starting point. The amount of solar access received by the photovoltaic modules is crucial to the financial feasibility of any PV system. Latitude is a primary factor.

2.1.2. Solar Irradiance

Do you need a solar system diagram?

These drawings should accurately represent the installed elements of the system and should be provided to the homeowner (likely to be used by future solar installer for obtaining a building permit). In addition, the homeowner should be provided with a one-line electrical riser diagram of the PV system components.

What should be included in a PV system drawing?

The drawings should also contain information about the PV array mounting system and identify the specifications for the major equipment including manufacturer, model and installation details. Figure 1. PV system drawing example (Source: Renewable Energy Ready Home Solar Photovoltaic Specification Guide 2011).

How does a photovoltaic system work?

The heart of a photovoltaic system is the solar module. Many photovoltaic cells are wired together by the manufacturer to produce a solar module. When installed at a site, solar modules are wired together in series to form strings. Strings of modules are connected in parallel to form an array.
