

What are colloidal quantum dots?

We describe recent progress in the synthesis of colloidal quantum dots (QDs) and describe their optoelectronic properties and further applications in solar technologies, including solar cells, solar-driven hydrogen production, and luminescent solar concentrators. QDs are fluorescent nanocrystals with nanoscale dimensions (< 20 nm).

Are solar cells based on a solution-processed semiconductor nanoparticle a good idea?

Nature Photonics 6,133-135 (2012) Cite this article Solar cells based on solution-processed semiconductor nanoparticles -- colloidal quantum dots -- have seen rapid advances in recent years. By offering full-spectrum solar harvesting, these cells are poised to address the urgent need for low-cost, high-efficiency photovoltaics.

Are quantum dot solar cells a viable alternative to conventional devices?

Solar cells based on solution-processed colloidal quantum dots are promising alternatives to conventional devices. This Review discusses recent advances and outstanding challenges for the field of quantum dot solar cells towards their commercialization.

What is a solution-processed photovoltaic?

Solution-processed photovoltaics use low manufacturing temperatures, and have consequently minimized energy expenditure, in their fabrication. Among solution-processed solar technologies, colloidal quantum dots (CQDs) are actively explored, particularly for their spectral tunability at the time of synthesis.

What are solution-processed heterojunction solar cells based on?

Rath, A. K., Bernechea, M., Martinez, L. & Konstantatos, G. Solution-processed heterojunction solar cells based on p-type PbS quantum dots and n-type Bi₂S₃ nanocrystals. Adv. Mater. 23,3712-3717 (2011). Rath, A. K. et al. Remote trap passivation in colloidal quantum dot bulk nano-heterojunctions and its effect in solution-processed solar cells.

Are solar cells a solution-phase chemical processing technology?

Third, we focus on progress in solution-phase chemical processing, such as spray-coating and centrifugal casting, which has led to the demonstration of manufacturing-ready process technologies. Solar cells based on solution-processed colloidal quantum dots are promising alternatives to conventional devices.

A scheme of the charge separation process at the Donor:Acceptor interface in a hybrid solar cell. The major photovoltaic steps include: photo-excitation into excitons (1), ...

Unprecedentedly Large Photocurrents in Colloidal PbS Quantum-Dot Solar Cells Enabled by Atomic Layer Deposition of Zinc Oxide Electron Buffer Layer. ACS Applied Energy Materials 2021, 4 (12), 13776 ...

This thesis studies lead sulphide (PbS) colloidal quantum dots and their photovoltaic applications. Different sizes of PbS QDs were synthesised and characterised using absorption ...

We describe recent progress in the synthesis of colloidal quantum dots (QDs) and describe their optoelectronic properties and further applications in solar technologies, ...

In this review, we provide a comprehensive overview of the recent developments in IPVs. We primarily focus on third-generation solution-processed solar cell ...

The proposed photovoltaic structure employs isopropylamine (IPAM)-capped lead sulfide (PbS) colloidal quantum dots. Colloidal quantum dots (CQDs) are solution ...

The depleted heterojunction colloidal quantum dot solar cell implements charge separation at the front side of the cell via a junction between the active layer and a large-bandgap...

Colloids are a vital component of perovskite precursor solutions (PPSs), significantly influencing the quality of perovskite film formation. Despite their importance, a ...

Colloidal quantum dot (CQD) shows great potential for application in infrared solar cells due to the simple synthesis techniques, tunable infrared absorption spectrum, and ...

5 Multiple exciton generation in semiconductor quantum dots and electronically coupled quantum dot arrays for application to thirdgeneration photovoltaic solar cells; 6 ...

Infrared photovoltaic cells (IRPCs) have attracted considerable attention for potential applications in wireless optical power transfer (WOPT) systems. As an efficient fiber ...

Due to some specific properties like tunable size bandgap, low temperature, and adaptable optoelectronic properties, Colloidal Quantum Dot Solar Cell (CQDSCs) are ...

Colloidal quantum dots (QDs) have lately been pursued with intense vigor for optoelectronic applications such as photovoltaics (PV), flexible electronics, displays, mid-infrared ...

5 ???· Colloidal quantum dots (QDs) have been regarded as cost-effective sunlight capture semiconductor nanocrystals for efficient solar cell technologies due to their unique optical and ...

A Schottky junction solar cell is likely the simplest photovoltaic device that can be fabricated. Colloidal quantum dot sensitized solar cells using simple Schottky junction offer ...

In addition, some types of colloidal quantum dots can be fabricated using inexpensive solution processing methods. In theory, quantum dot cells could be highly efficient, especially for use in concentrated

photovoltaics. In practice, ...
