What is a battery pack calculator?

This battery pack calculator is particularly suited for those who build or repair devices that run on lithium-ion batteries, including DIY and electronics enthusiasts. It has a library of some of the most popular battery cell types, but you can also change the parameters to suit any type of battery.

How do I Choose an EV battery pack?

The voltage you picked will determine the voltage of your motor, controller, and charger. The max discharge rate will give you the max amps for the controller. Building an EV Battery Pack for your EV Swap. Power, Range, and Top Speed will be the biggest factors in the components that you choose.

How to get voltage of a battery in a series?

To get the voltage of batteries in series you have to sum the voltage of each cell in the serie. To get the current in output of several batteries in parallel you have to sum the current of each branch .

How to choose a battery pack?

Therefore, it's crucial to consider the size and weight of the vehicle when selecting the voltage of the battery pack. Another important aspect to consider when selecting the voltage of the battery pack is the horsepower of the vehicle. The higher the voltage, the higher the horsepower, as well as the higher the top speed.

What is the global capacity of 2 batteries in series?

The global capacity is the same for 2 batteries in series or two batteries in parallel but when we speak in Ah or mAh it could be confusing. - 2 batteries of 1000 mAh, 1.5 V in series will have a global voltage of 3V and a current of 1000 mA if they are discharged in one hour.

What is the capacity of a battery or accumulator?

The capacity of a battery or accumulator is the amount of energy stored according to specific temperature, charge and discharge current value and time of charge or discharge.
