

Cooling and maintenance methods for energy storage charging piles

What is a charging pile management system?

The traditional charging pile management system usually only focuses on the basic charging function, which has problems such as single system function, poor user experience, and inconvenient management.

Can energy-storage charging piles meet the design and use requirements?

The simulation results of this paper show that: (1) Enough output power can be provided to meet the design and use requirements of the energy-storage charging pile; (2) the control guidance circuit can meet the requirements of the charging pile; (3) during the switching process of charging pile connection state, the voltage state changes smoothly.

Does PCM cooling improve high power fast charging Pile performance?

Novel thermal management system and PCM cooling is proposed for high power fast charging pile. Transient thermal analysis model is firstly given by introducing an enthalpy method. Beneficial effect of applying the PCM for the novel thermal management performance is evaluated at different charging conditions.

Can battery energy storage technology be applied to EV charging piles?

In this paper, the battery energy storage technology is applied to the traditional EV (electric vehicle) charging piles to build a new EV charging pile with integrated charging, discharging, and storage; Multisim software is used to build an EV charging model in order to simulate the charge control guidance module.

How EV charging pile is cooled?

The typical cooling system for the high-power direct current EV charging pile available in the market is implemented by utilizing air cooling and liquid cooling. The heat removal rate of the air cooling scheme depends upon the airflow, fans, and heat sinks (Saechan and Dhuchakallaya, 2022).

How much heat does a fast charging pile use?

The heat power of the fast charging piles is recognized as a key factor for the efficient design of the thermal management system. At present, the typical high-power direct current EV charging pile available in the market is about 150 kW with a heat generation power from 60 W to 120 W (Ye et al., 2021).
