When did lithium-ion batteries become commercialized?

1991ushered the Second Period (commercialization) in the history of lithium-ion batteries, which is reflected as inflection points in the plots " The log number of publications about electrochemical powersources by year" and " The number of non-patent publications about lithium-ion batteries" shown on this page.

Why are lithium-ion batteries growing rapidly in developed countries?

Precisely because lithium-ion batteries have high volume-specific and mass-specific energy, are rechargeable and non-polluting, and have the three major characteristics of the current development of the battery industry, they are growing rapidly in developed countries.

Are lithium-ion batteries the future of battery technology?

Conclusive summary and perspective Lithium-ion batteries are considered to remain the battery technology of choice for the near-to mid-term future and it is anticipated that significant to substantial further improvement is possible.

How did lithium ion battery technology start?

The breakthrough of the lithium-ion battery technology was triggered by the substitution of lithium metal as an anode active material by carbonaceous compounds,nowadays mostly graphite . Several comprehensive reviews partly or entirely focusing on graphite are available [28,,,,,].

Who invented lithium ion batteries?

In 1999, eight Japanese companies led by Panasonic launched their first polylithium products. It is called the first year of polymer lithium-ion batteries by the Japanese. In 1999, South Korea entered the lithium-ion battery market, and LG Chem completed South Korea's first battery product. In 2000, BYD won an order from Moto.

How can lithium-ion batteries be improved?

Researchers are continuously working on ways to improve the charging speed and lifespan of lithium-ion batteries. New materials and technologiesare being developed to allow batteries to charge in minutes rather than hours and to last significantly longer. These advancements will make lithium-ion batteries even more convenient and cost-effective.
