

What are roof-mounted solar panels?

Roof-mounted solar panels are simply solar panels that are mounted to your roof. These are the most common types of solar panels installed on domestic properties, as they rarely require planning permission, are cheaper to install than other types of solar panels, and don't take up any space that you might later want to use.

What is a solar roof system?

The system is made up of individual panels mounted onto the roof which sit on top of your existing tiles or other roof finish. This solar roofing system is proven and widely available, but the main downside is the aesthetics. With an on-roof system, the panels are clearly added on as an afterthought and are not integrated into your home.

Do solar panels need a roof?

The installation of solar panels must comply with standard building regulations of a property, which cover Part A (structure), B (electrical) and P (fire). When it comes to roof structure, the roof must be able to support the weight of the solar panels easily.

What is on-roof solar roofing?

On-roof solar panels make up the most widely recognisable solar roofing system in the UK. The system is made up of individual panels mounted onto the roof which sit on top of your existing tiles or other roof finish. This solar roofing system is proven and widely available, but the main downside is the aesthetics.

How do in-roof solar panels work?

Simple panel to panel connection guides the installer in to the correct position by simply pushing the panels together. In-roof solar panels are lightweight and easy to carry. A combination of strength and simplicity - each panel weighs only 8.95kg. In-roof solar can be installed or removed in under one minute per panel.

What are the different types of domestic solar panels?

Domestic properties usually include houses, flats, and bungalows that may be privately owned, rented, or leased. Depending on the property type, there are two options for domestic solar panel installations: roof-mounted and ground-mounted solar panels.
