These types of capacitors can handle much higher voltages than solid-state capacitors. While a solid-state capacitor can handle between 6 and 100 volts, an electrolytic capacitor can handle up to 500 volts or more. ESR. ESR stands for Equivalent Series Resistance, and it refers to the total resistance in a capacitor. For high-frequency ...

So a capacitor is both a solid state and a non solid state device. But solid state in the early years of consumer electronics actually was used to describe how components where joined together with the first "solid state" TV's using what we ...

\$begingroup\$ Phone chargers probably have a very loose ripple voltage spec, compared to some general purpose AC/DC converter. If the switching frequency is high enough, you can get away with such small

capacitance value, where it becomes easier and cheaper to use MLCC over Al electrolytics as explained in @Justme 's answer.
