

As shown in Fig. 3, many safety C& S affect the design and installation of ESS. One of the key product standards that covers the full system is the UL9540 Standard for Safety: Energy Storage Systems and Equipment [1]. Here, we discuss this standard in detail; some of the remaining challenges are discussed in the next section.

The Nuvation BMS design is proving itself with design wins in grid energy-storage systems and power-backup equipment, where reliability and ruggedness are critical. The key advantage of this off-the shelf BMS is its tiered, hierarchical topology (Figure 2) with three subsystems, each with unique functions, as shown in Figure 3.
