

What is a solar panel electricity system?

Solar panel electricity systems, also known as photovoltaics (PV), capture the energy from the sun using photovoltaic cells. These cells are able to generate electricity on an overcast day, not relying on direct sunlight to function. The cells convert sunlight into electricity which a household can utilise. What does photovoltaic (PV) mean?

Can solar panels save you money?

Solar panels could help you save £100s a year on your electricity bills. Using the energy you generate can mean big savings for some households. You can get paid to export electricity you generate but don't use through the smart export guarantee (SEG). An average home could earn up to £320/year.

What are the benefits of switching to solar PV?

There are several benefits of switching to solar PV: Using solar energy means you will be reducing your electricity bills. The more solar energy you generate, the less you'll be paying for electricity; Solar energy systems typically don't require much maintenance, cleaning twice a year should suffice.

What is a solar PV system?

Derived from the words 'photo', which is Greek for light, and 'voltaic', meaning voltage, photovoltaic basically means electricity from the energy of the sun. There are several benefits of switching to solar PV: Using solar energy means you will be reducing your electricity bills.

How much does a solar PV system cost?

Using solar energy means you will be reducing your electricity bills. The more solar energy you generate, the less you'll be paying for electricity; Solar energy systems typically don't require much maintenance, cleaning twice a year should suffice. Most domestic solar PV systems are 4kWp and cost between £5,000 and £8,000.
