

Stationary Energy Storage: In addition to their application as vehicles, EV batteries can be repurposed for stationary energy storage systems. These systems can store excess renewable energy generated during off-peak periods and discharge it during peak demand, helping balance the electricity grid. Development Prospects ----

The energy storage rate  $q_{sto}$  per unit pile length is calculated using the equation below:  $(3) q_{sto} = m \cdot c_w \cdot (T_{in} - T_{out}) / L$  where  $m$  is the mass flowrate of the circulating water;  $c_w$  is the specific heat capacity of water;  $L$  is the length of energy pile;  $T_{in}$  and  $T_{out}$  are the inlet and outlet temperature of the circulating water flowing through the ...
