Battery manufacturing is a high-risk, hazardous industry, but that doesn't mean that workers can't get home safe to their families at the end of the day.

Who created the EV battery safety document?

The document was produced through a collaborative process by a subcommittee of SP's Responsible Battery Work Group who pooled their expertise and knowledge to prioritize EV battery safety.

Is battery manufacturing an dangerous industry?

Battery manufacturing is a high-risk, hazardous industry. However, it doesn't mean that workers can't get home safe to their families at the end of the day. If you're ready to commit to keeping your employees safe, you need the right tools for the task. That's where we can help.

Why is battery manufacturing a key feature in upscaled manufacturing?

Knowing that material selection plays a critical role in achieving the ultimate performance, battery cell manufacturing is also a key feature to maintain and even improve the performance during upscaled manufacturing. Hence, battery manufacturing technology is evolving in parallel to the market demand.
