

What does central battery system & emergency lighting do?

Emergency lighting is a backup lighting solution that powers up in the event that mains power supply is unable to function correctly in an emergency, such as a fire or power cut.

How do emergency lighting batteries get charged?

The emergency lighting batteries can either be kept within the body of the individual emergency lighting units or accessed via an independent wired circuit. They get charged by the mains supply.

How do emergency escape lighting systems work?

Emergency escape lighting systems utilise a variety of technologies, including battery backup lighting, to ensure that designated evacuation routes remain illuminated during power failures or emergencies, thereby guiding occupants safely to exits with emergency light fittings.

Why do emergency lighting units need a mains supply?

Emergency lighting units require a mains supply to keep their batteries charged. In the event of an emergency and power failure, escape routes and emergency exits must be illuminated for buildings to be evacuated safely and quickly. The Emergency Lighting range from The Safety Centre features fittings from Ringtail.

Do backup lights need a replacement battery?

When the time comes, ensure your backup lights have the power they need with the correct replacement batteries. Compatibility: Match your existing emergency lighting fixture (refer to product specifications). Self-Contained Power: Provide an independent power source during outages.

Do emergency lights need a replacement battery?

The functionality of your emergency lighting system hinges on a reliable power source. When the time comes, ensure your backup lights have the power they need with the correct replacement batteries. Compatibility: Match your existing emergency lighting fixture (refer to product specifications).
