What type of conductor is a capacitor?

Two conductors in close proximity to each other with a layer of non-conducting insulating medium sandwiched between them, this constitutes a capacitor. A capacitor stores charge when a voltage is applied between the two extreme plates of the capacitor.

What is a capacitor in physics?

Definition of Capacitor A capacitor is an element that stores electricity and electrical energy (potential energy). A conductor surrounded by another conductor, or a conductor in which all the electric field lines emitted by one conductor terminate in the other conductor, is called a capacitor.

What is the unit of capacitance of a capacitor?

The capacitance of a capacitor is numerically equal to the ratio of the charge on a conducting plate to the voltage between the two plates. The basic unit of capacitance of a capacitor is the farad (F). The letter C is usually used in circuit diagrams to denote a capacitive element.
