

Are graphene-based electrode materials suitable for supercapacitors?

Graphene-based materials in different forms of 0D, 1D, 2D to 3D have proven to be excellent candidates of electrode materials in electrochemical energy storage systems, such as supercapacitors.

What is the capacitance of a graphene-PANI composite?

The hybrid type film presents a gravimetric capacitance of  $233 \text{ F g}^{-1}$  and a volumetric capacitance of  $135 \text{ F cm}^{-3}$ . Similarly, Wei et al. synthesized a graphene-PANI composite by a polymerization method, where graphene (~15 wt %) was homogeneously coated on to PANI sheets.

What are conductive polymers & graphene-based composites?

Conductive polymers and graphene-based composites have emerged as promising electrode materials for supercapacitors and electrochemical sensors due to their improved electrochemical properties and versatility of the synthesis methods.

What is an example of a CP/graphene hybrid capacitor?

Another example of the CP/graphene hybrid capacitor was reported by Mousavi et al. <sup>77</sup> They used electrochemically reduced PANI/GO composite as in a symmetric supercapacitor with CC-enriched  $1 \text{ M H}_2\text{SO}_4$  electrolyte. CV investigations showed that pronounced Faradaic peaks originated from the CC/o-quinone redox transition.

Are graphene-based materials suitable for supercapacitors and other energy storage devices?

The graphene-based materials are promising for applications in supercapacitors and other energy storage devices due to the intriguing properties, i.e., highly tunable surface area, outstanding electrical conductivity, good chemical stability and excellent mechanical behavior.

Does graphene-MnO<sub>2</sub> have a specific capacitance?

Their experimental results show that the graphene-MnO<sub>2</sub> composite powders exhibit a specific capacitance value of  $211.5 \text{ F g}^{-1}$  at the potential scan rate of  $2 \text{ mV s}^{-1}$  and with about 75% capacitance being retained after 1000 charge/discharge cycles in  $1 \text{ M Na}_2\text{SO}_4$  electrolyte. Dai et al. synthesized Ni(OH)<sub>2</sub> nanoplates on graphene sheets.

The results demonstrate that the M/PTh-3 composite has the best capacitance with a maximum value of  $265.96 \text{ F g}^{-1}$ . The specific capacitance remains at 91.5% even after 500 cycles, which demonstrates that the composite electrode is a promising material for the high-performance electrochemical capacitor applications.

As shown in Fig. 3a, a 3D gel-like 3D CoS/graphene composite is formed at various weight ratios (r) of GO and  $\text{Co}(\text{CH}_3\text{COO})_2 \cdot 4\text{H}_2\text{O}$ . Fig. 3b shows the flower-like structure of CoS ...

In this paper, a polypyrrole/graphene oxide (PPy/GO) composite electrode, applied to the capacitive deionization process for removing heavy metal ions, was prepared by one-step electrochemical ...

Composite materials incorporating graphene have emerged as promising candidates for enhancing both energy and power density in supercapacitors, owing to ...

?-Fe<sub>2</sub>O<sub>3</sub> Nanotubes-Reduced Graphene Oxide Composites as Synergistic Electrochemical Capacitor Materials  
Electronic Supplementary Information Contents List 1. Table S1 Electrochemical properties of various metal oxide-graphene materials composite electrodes explored in aqueous electrolytes 2 2. Experimental section 3-5 3. Fig.

The shadowed area in Fig. 8 indicates the specific energy against the specific power region occupied by typical electrochemical capacitors, ... Synthesis of porous graphene/activated carbon composite with high packing density and large specific surface area for supercapacitor electrode material. J. Power Sources, 258 ...

Among 2D NiCo<sub>2</sub>O<sub>4</sub>/graphene composite, the electrochemical performance of composite is dependent on NiCo<sub>2</sub>O<sub>4</sub> microstructures, the type of graphene and the ratio of NiCo<sub>2</sub>O<sub>4</sub>/graphene. About the microstructure, NiCo<sub>2</sub>O<sub>4</sub> nanowires, nanoneedles, nanorods, nanobundles, nanosheets, tremella, and sea urchin microspheres have been reported.

Supercapacitors, as one of the energy storage devices, exhibit ultrahigh capacitance, high power density, and long cycle. High specific surface area, mechanical and chemical stability, and low cost are often required for ...

A high-voltage asymmetric electrochemical capacitor based on graphene as negative electrode and a MnO(2) nanowire/graphene composite (MGC) as positive electrode in a neutral aqueous Na(2)SO(4) solution as electrolyte opens up the possibility of graphene-based composites for applications in safe aqueously electrolyte-based high- voltage asymmetric ECs ...

In this article, a focused review of the synthesis methods, structural and electrochemical properties of graphene composite electrode materials for supercapacitor ...

In this paper, a polypyrrole/graphene oxide (PPy/GO) composite electrode, applied to the capacitive deionization process for removing heavy metal ions, was prepared by one-step electrochemical codeposition. ... Preparation of a Polypyrrole/Graphene Oxide Composite Electrode by Electrochemical Codeposition for Capacitor Deionization.

Electrochemical alongside the electro-catalytic properties of graphene and multi-walled carbon nanotubes have been improved via doping with manganese oxide nanostructures. Structural, morphological, and

electrochemical properties of the as-synthesized nanocomposites were identified using XRD, FTIR, SEM, and electrochemical methods including cyclic ...

In this study, vanadium dioxide (VO<sub>2</sub>) combined with sulphur-doped reduced graphene oxide (S-rGO) as a composite material is reported. Vanadium dioxide sulphur-doped reduced graphene oxide (VO<sub>2</sub>@S-rGO) composite was successfully synthesized via a rapid solvothermal technique by varying the S-rGO concentration on VO<sub>2</sub>. The structural, ...

Researchers studied graphene-metal oxide composites for super capacitor electrochemical performance [133], as stable electrode materials [145], and as anode materials in lithium-ion batteries [134]. Due to these characteristics, it can be anticipated that these composites will be able to be applied in photo catalysis, sensors and in other [132] .

It facilitates the formation of 3D conductive network on the cotton fabrics. The graphene/cotton composite fabrics were used as a flexible electrode for electrochemical capacitors, showing ...

In response to the development needs for lightweight and functional aviation electric aircraft, as well as cleaner and sustainable green energy, this study designed a graphene oxide-based carbon fiber structural supercapacitor with integrated structure and energy storage capabilities. It possesses electrical storage stability and meets mechanical load-bearing ...
