

How much electricity does Guatemala have?

As of 2020, Guatemala had 4110 MW of installed electrical capacity, based primarily on hydro power (38.38%), fossil fuels (30.36%), and biomass (25.20%). Other renewable sources represented a much smaller percentage of capacity, including wind (2.61%), solar (2.25%) and geothermal energy (1.20%).

What is energy security in Guatemala?

Within that context, energy security is to be defined with accordance to the electricity supply, taking into account needs and objectives of the country's energy policy. The key aspects of the energy security perspective in Guatemala are: adequacy, resilience and sovereignty.

Can geothermal power be used in Guatemala?

The Guatemalan government has a plan of using geothermal power to supply for two thirds of the country's energy needs by 2022. Thus reducing oil imports and stabilizing the country's energy supply. Crude oil production in Guatemala has high potential, with estimations suggesting the possibility of reaching 50000 barrels/day.

What is the future of energy in Guatemala?

Competition with the possibility of developing cheaper energy sources, such as: hydropower & natural gas. The Guatemalan government has a plan of using geothermal power to supply for two thirds of the country's energy needs by 2022. Thus reducing oil imports and stabilizing the country's energy supply.
