

What is a solar EV charger?

Solar EV chargers allow you to charge your electric car using energy generated from your home solar panels. This lets you fuel your EV for free using the power of the sun, rather than pulling from the grid. Look for an EV charger with a solar input that's compatible with your inverter.

Are solar panels a good choice for an EV home charging station?

An electric car can be as much as three times cheaper to run than a petrol car, but there is a way to reduce EV running costs and emissions even further. Solar panels are the perfect partner for an EV home charging station, as buying solar panels is like bulk-buying fuel for your EV.

How do I charge my EV with solar?

With a small setup like this, you can either charge your EV slowly with 100% solar or supplement grid energy with solar energy to slash your charging costs. You need only two things to charge your EV with solar panels: a solar system and a smart home charger with solar integration. These are the best chargers with solar we've reviewed:

Can solar PV power an EV home charging point?

Solar PV panels convert natural energy from the sun into electricity which can be used to power an EV home charging point. This means that the car will use clean energy to run and will not produce tailpipe emissions. Solar PV panels generate free electricity which can charge an EV during the day.

Can a home EV charger charge a car with solar power?

Technically, all home EV chargers can use solar power to charge your car. The solar inverters attached to your panels convert electricity into AC for your charger to use, which is then re-converted back to DC by your car battery. As such, any home AC charger you have installed can draw electricity from your solar panels without a problem.

How does solar EV charging work?

For solar EV charging, the DC output from the PV panels connects directly to a bidirectional DC-DC converter. This converter can step up or step down the voltage as needed for charging the EV battery. During the day when the sun is shining, the solar PV panels generate electricity which provides power to charge the EV through the DC-DC converter.
