

How many amperes can a storage charging pile charge

So, a 3S battery will, at peak charge, only be discharged at a little over 1.5 amps anyway, climbing up a little as the voltage comes down. Even at 3.8 per cell (so 11.4 total), you won't even get to 2.0 amps. Set it to storage charge at 2.0 amps and the charger will do the rest (though it may take a few hours depending on where you're starting ...
