

How to check whether the solar panel is working properly

How do I know if my solar system is working?

The installer should supply the instructions to you, but you can always look them up on the manufacturer's website. A simple way to check on the health of your system is to look at the colour of the lights shining on the box on a sunny day, when the system should be busily generating solar power.

Should I test my solar panels?

If you're still concerned over your solar performance, speak to the installer who fitted your system. It's a good idea to contact them if you notice any issues when testing your solar panels. Why is it important to test solar panels?

How do I test my solar panels?

So, let's go through some ways to test your solar panels. 1. Check your generation meter for a red light. Most generation meters will have some sort of indication light that will let you know instantly if your system is not functioning correctly.

What should I do if my solar panel system is not working?

When your solar panel system isn't performing as expected, follow these troubleshooting steps: 1. Check the Monitoring System: Ensure your monitoring system is online and accurately reporting data. 2. Inspect the Panels: Look for physical damage, dirt, or debris on the panels that could be blocking sunlight. 3.

Why should I monitor my solar panel system?

Regular monitoring of your solar panel system is essential for several reasons: Ensures your system is producing the expected amount of energy, helping to maximize savings and reduce reliance on the grid. Allows for the early identification of issues such as shading, soiling, or equipment failure, preventing larger problems.

How do I know if my solar panels are bad?

Nevertheless, individual panels can fail faster than that. If you can do so safely, check the panels occasionally for any obvious signs of problems; for example, discoloured areas on the solar cells (usually a 'hot spot', where the panel overheated and was damaged).
