

# How to choose a battery mobile power supply model

How to choose a battery for a portable power station?

If you use the portable power station for various scenarios, you can choose AC ports for electrical equipment, Type-C for charging smartphones, and DC carport for automotive equipment. Lead-acid and lithium-ion batteries are primarily used in portable power stations. Weight, capacity, and lifespan should be considered when choosing a battery type.

What is a portable power supply?

A portable power supply is a large-capacity power supply that can store electric energy in portable power stations. These portable power stations are ideal for use inside or outside your home during outdoor activities for a consistent energy supply. A portable power station has different outputs and can be charged in multiple ways.

How to maintain a portable power supply?

Here are some tips for keeping the portable power supply: Regularly charge the battery: To keep your portable power station ready to use, make sure to charge the battery regularly. Even if you are not using it, you should charge the battery as this will extend the battery life and maintain its health. Store the battery in a cool place.

How do I choose the right size portable power station?

To select the right size of portable power stations, you should determine what devices you want to power and for how long. For example, a Jackery Explorer 3000 Pro Portable Power Station can charge a gaming computer (200W) and a laptop (80W),  $\text{Working Time} = \frac{\text{Capacity in Wh}}{0.85 \times \text{Operating wattage of the appliances}}$ .

What is a solar powered portable power supply?

A solar-powered portable power supply offers solar power solutions to homes. These are also used during blackouts, off-grid living, and outdoor adventures, ensuring flexibility through expanding the system with additional batteries. Portable power stations like the Jackery Portable Power Stations have developed portability.

What are the components of a portable power station?

Some components of a portable power station include a battery system, inverter, battery management system, controller, suppression, alarms, and sensors. A portable power station can convert direct current (DC) into alternating current (AC) that can be used by other devices. It also supports an interface DC output to charge many appliances.
