

How do I choose the right capacitor?

When choosing the right capacitor, consider the following: Capacitance value: The capacitance value is critical as it determines the amount of electric charge the capacitor can store. Selecting the appropriate capacitance is key to ensure it meets the circuit's functional requirements.

What type of capacitor should I use?

Unless there are specific circuit requirements, and if the required capacitance is in Picofarad, a ceramic capacitor can be used. If the required capacitance is in Nanofarad, MLC (Multilayer Ceramic) capacitors can be blindly trusted. If the capacitance necessary is in Microfarad, aluminum electrolyte capacitors are a common choice.

What factors should be considered when choosing a capacitor?

Physical size and form factor: The physical size and form of the capacitor should be considered to ensure it fits within the spatial constraints of your design. Temperature range: Selecting a capacitor that can operate within the environmental temperature extremes of your application is essential for reliable performance.

Can a capacitor be installed in series?

Though there are few cases to install a capacitor in series. In my designs, I am not allowing to a voltage stress of more than 75%. This means, if the actual circuit voltage is 10V, the minimum capacitor voltage I will select is 13.33V ($10V/0.75$). However, there is no such voltage. So, I will go to the next higher level that is 16V.

How to choose a film capacitor?

Thus, the first option is to consider an electrolytic capacitor. In some applications that the ripple current is very high, electrolytic capacitor will not work anymore as its ripple current is smaller. In this case, film capacitors are chosen as they are having very high ripple current rating.

What are the different types of ceramic capacitors?

Other types of ceramic capacitors include ceramic disk capacitors which are useful for high-frequency and high-voltage applications. Aluminium electrolytic capacitors are commonly used in applications where a large capacitance is desired.
