

How to repair the old energy storage charging pile

A 120-kW electric vehicle DC charger with two charging guns. New energy electric vehicles will become a rational choice to realize the replacement of clean energy in the field of transportation; the advantages of new energy electric vehicles depend on the batteries with high energy storage density and the efficient charging technology.

Fig. 13 compares the evolution of the energy storage rate during the first charging phase. The energy storage rate q_{sto} per unit pile length is calculated using the equation below: $(3) q_{sto} = m \cdot c_w \cdot T_{in\ pile} - T_{out\ pile} / L$ where m is the mass flowrate of the circulating water; c_w is the specific heat capacity of water; L is the ...
