

What are the batteries regulations?

The batteries regulations set out restrictions on the use of mercury and cadmium in new batteries, labelling requirements, and removability of waste batteries from appliances. They also establish a framework for the separate collection, treatment, and recycling of batteries when they become waste. You must comply with the batteries regulations if your business:

What types of batteries are regulated?

The regulations cover all types of batteries, regardless of their shape, volume, weight, material composition or use; and all appliances into which a battery is or may be incorporated. There are some exemptions including batteries used in:

What are the regulations relating to batteries and accumulators?

Dependent on the legislation item being viewed this may include: These Regulations partially implement Directive 2006/66/EC of the European Parliament and of the Council on batteries and accumulators and waste batteries and accumulators and repealing Council Directive 91/157/EEC (OJ No. L266, 26.9.2006, p.1) ("the Directive").

What are the regulations relating to waste batteries?

The specific obligations in relation to waste batteries depend on their type, but all require registration with the appropriate environmental regulator via the National Packaging Waste Database.

What are the environmental laws relating to batteries?

Two main pieces of environmental legislation relate specifically to batteries: they set out restrictions on the use of mercury and cadmium in new batteries and establish labelling requirements and removability of waste batteries from appliances.
