

What are integrated ceiling lights?

Integrated ceiling lights are lights that are set into the ceiling, which ensure even lighting distribution as well as a stylish look for any room. Spotlights are an example of integrated lighting, but there are many options available for making lighting a seamless part of your ceiling. Why choose integrated ceiling lights?

Are integrated ceiling lights a good idea?

Integrated ceiling lighting often comes in LED form, meaning that the lights are energy efficient, they emit less heat than incandescent lights, and they last for a long time. By setting these into the ceiling, you're future-proofing your room's lighting, as well as providing the right, functional amount of light.

What is a linear ceiling light?

Linear ceiling lights fit within a linear ceiling's paneling, distributing light over a large area, with a design led look that remains flexible and easy to install. Why choose SAS? When it comes to creating a stylish space that will continue to look and function perfectly for years to come, SAS can offer you the full package.

Do suspended ceiling lights fit a drop ceiling?

Suspended ceiling lights fit into tiles or linear ceilings, integrating seamlessly into a drop ceiling when standard lighting isn't suitable. Both timber and metal ceiling baffles are a stylish addition to any room, and baffle ceiling lights provide the perfect lighting to go with it.

Can a capacitor be used at a higher frequency?

The capacitors can be used at a frequency range of 50-60 Hz. Use at higher frequencies is possible provided the voltage, current, temperature and power limits are complied with. In accordance with the reference standards, the temperatures are those measured on the surface on the capacitor. -40°C ;... $+85^{\circ}\text{C}$. Rated tolerances, $\pm 5\%$, $\pm 10\%$.

What is a series compensation capacitor?

“Series” compensation. of the mains (420-440 V) and a temperature range of -25°C to $+85^{\circ}\text{C}$, up to 100°C for some applications. It must also be considered that a switch-on voltage transients may occur on the capacitor; their size depends on the type of lamp and they must be considered when selecting the capacitor.
