

Why do 6.0V batteries need different Chargers?

In the late 90s, many manufacturers switched from using NiCd batteries inside the 6.0V pack, and began using the improved NiMH battery chemistry. These require different chargers. Why the switch to NiMH and why does this matter? As you may have noticed from my earlier shot of six different 6.0V packs, not all of them were NiCd rechargeable.

Should I buy a NiMH or a 2600 mAh battery?

1) The batteries have a lower capacity than standard NiMH types - typically around 10 - 20% lower. If your batteries get used very frequently, these are not the best choice, you will get better performance from the standard 2600mAh types such as the ones we sell.

Which NiMH battery charger should I buy?

Common 6.0V NiMH Battery Chargers, some with battery included Both New Bright and Nikko sell older NiCd and newer NiMH chargers, so make sure you buy one that matches your battery! Warning on 110V/220V! Whenever buying electronics from other countries, always check the device is compatible with your country's power.

How many AA batteries are in a battery pack?

The pack contained 8 AA batteries still, but these were NiCd (Nickel Cadmium) batteries allowing them to be recharged, at the cost of a reduced power output of 1.2V per battery ($8 \times 1.2V = 9.6V$) compared with the full 12V that some fresh (and expensive single use) AA Alkaline 1.5V batteries would provide ($8 \times 1.5V = 12V$).

Which brands use the same design as Nikko 6.0V toy battery pack?

There are Nikko, Tyco, Taiyo, Radio Shack, and many other brands using the identical design. As we can see from this Nikko brand 6.0V toy battery pack, the main external design features that make this product work are:

Which rechargeable batteries are available?

We also stock rechargeable Li-Ion LiFePO4 3.2V batteries in 14430 (4/5AA), 14500 (AA) and 18650 sizes. A range of High Capacity Nickel Metal Hydride and Nickel Cadmium rechargeable batteries that are tagged with solder tags ready for making your own battery packs.
