the primary region for talent and resource aggregation. As Kunming's urban space continues to expand and population density increases, while this urbanization has promoted socio-economic ...

January Weather in Kunming China. Daily high temperatures increase by 3°F, from 58°F to 60°F, rarely falling below 47°F or exceeding 68°F.. Daily low temperatures are around 38°F, rarely falling below 32°F or exceeding 44°F.The lowest daily average low temperature is 37°F on January 3.. For reference, on April 30, the hottest day of the year, temperatures in Kunming ...

October Weather in Kunming China. Daily high temperatures decrease by 4°F, from 70°F to 65°F, rarely falling below 56°F or exceeding 76°F.. Daily low temperatures decrease by 7°F, from 57°F to 50°F, rarely falling below 44°F or exceeding 62°F.. For reference, on April 30, the hottest day of the year, temperatures in Kunming typically range from 56°F to 75°F, while on January 3, the ...

A study of the operational performance of a grid-connected building-integrated photovoltaic (BIPV) system, a 120 kWp monocrystalline, in Kunming, China, was conducted.

Abstract A new solar adsorption refrigeration system integrated with a compound parabolic concentrator (CPC) adsorber was proposed. Comparative experiments were conducted to investigate the system behaviour with the enhanced and ...

This paper compares the performance of a 2.02 kW p off-grid residential solar photovoltaic (PV) power system using PVSYST simulation software for a household in ...

Grid-Connected Semitransparent Building-Integrated Photovoltaic System: The Comprehensive Case Study of the 120 kWp Plant in Kunming, China March 2018 International ...

Assessment of urban flood resilience based on the socio-ecological composite index model: a case study in Wuhua District, Kunming City, China Water Sci Technol . 2024 Jan;89(2):252-270. doi: 10.2166/wst.2023.413.

This paper aims to evaluate the effectiveness of FIT and RPS policies in promoting solar PV installed capacity in China by using a system dynamics model. Several ...

DOI: 10.1016/J.IJHYDENE.2017.01.033 Corpus ID: 99882859; Performance of off-grid residential solar photovoltaic power systems using five solar tracking modes in Kunming, China

Revealing the relationship between land use changes and soil erosion provides a reference for formulating future land use strategies. This study simulated historical and future soil erosion changes based on the RULSE and GeoSOS-FLUS models and used a random forest model to explain the relative importance of natural and anthropogenic factors on soil erosion. The main ...

The COP and the quantity of the ice-making was 0.15 and 50 kg per day, respectively. Another model of a solar-powered adsorption refrigeration system using PTC was developed (Abu-Hamdeh et al., 2013), where olive waste and methanol were employed as a working pair. The statistical value of the system COP varied from 0.18 to 0.2.
