

What is a lead acid battery?

A lead acid battery is a type of battery made up of plates of lead in a case filled with an electrolyte (dilute sulphuric acid). When this battery discharges, some of the lead from the plates combines with the electrolyte to form lead sulfate (PbSO_4), which builds up on the surface of the plates as crystals (as electrons leave the battery as electricity).

Are lead acid batteries dangerous?

Lead acid batteries contain chemicals that have the potential to be harmful to both your health and the environment. They contain lead which is a highly toxic metal and sulfuric acid which is a corrosive electrolyte solution. Proper handling procedures must be followed at all times.

How reliable is the NP33-12 Genesis AGM VRLA battery?

Buy the NP33-12 Genesis AGM VRLA Battery give excellent performance in either float or cyclic applications & long service life making the NP series the most reliable. Rapid delivery.

What is a PS-12330 battery?

Approved for transport by air. D.O.T., I.A.T.A., F.A.A. and C.A.B certified The PS-12330 is part of our PS range of sealed lead acid batteries (often referred to as VRLA) which have been specifically designed for general purpose and standby applications.

What are SLA/VRLA batteries?

SLA/VRLA batteries are also a type of AGM (Absorbed Glass Mat) batteries. AGM (Absorbed Glass Mat) - These batteries contain only enough liquid to keep the specially designed glass mat wet.

The Maxi Power 12V 33Ah Sealed Lead Acid Golf Trolley Battery is an ideal golf trolley battery replacement. Maxi Power recommends the 12v 33Ah battery to power a golf trolley around 36 ...
