How a lead-acid battery works?

In this article we will discuss about the working of lead-acid battery with the help of diagram. When the sulphuric acid is dissolved, its molecules break up into hydrogen positive ions ($2H^+$) and sulphate negative ions (SO_4^{2-}) and move freely.

What is the construction of a lead acid battery cell?

The construction of a lead acid battery cell is as shown in Fig. 1. It consists of the following parts : Anode or positive terminal (or plate). Cathode or negative terminal (or plate). Electrolyte. Separators. Anode or positive terminal (or plate): The positive plates are also called as anode. The material used for it is lead peroxide (PbO_2).

What are the parts of a lead acid cell?

In case of lead acid cell, the cell has got the following parts. Parts of lead acid battery. The different parts are studied independently: (a) Container. It is used to accumulate all the parts Of the cell or battery viz. plates, separators, electrolyte etc.

What are the main defects in a lead acid battery?

There may be the following main defects in a lead acid battery. (a) Sulphation. Formation of the lead sulphate layer on positive and negative plate is known as the sulphation. Effects. The capacity, life and the efficiency Of the cell is decreased. Reasons. There are the following reasons:
