# SOLAR PRO. Leakage of rooftop solar overflow

Why does my roof leak after installing solar panels?

There are various reasons your roof could leak after installing solar panels. They mostly have to do with poor installation where mounting holes are not sealed properly, the top is incompatible with solar panels, or the roof is old and not designed for solar panels.

#### Can you fix a roof leak under solar panels?

When faced with a roof leak under your solar panels, it's important to take immediate action to prevent further damage to your roof and home. Fixing a roof leak under solar panels requires careful attention to safety precautions and following the proper steps to resolve the issue.

#### Why is my solar hot water roof leaking?

More than anything, a solar hot water roof leak is likely going to occur near one of the valves. Closely examine all of the parts of your system in which valve, pipe fittings, and other hardware are installed to safely connect two components.

#### Can a rooftop solar system leak damage your home?

As the heart of the system, the circulating pump and controller may also be directly linked to control valves, pressure gauges, and various other system components where a leak is sprung. If your roof is designed to handle a little bit of rain, then it is unlikely that a rooftop solar system leak will cause any serious damage to your home.

#### What causes a roof leak?

There could be any number of causes for a leak, including damage caused by walking on the roof, dragging solar panels, or having a tile break in the underlayment. These are not issues you can resolve yourself, and since your warranty would cover these issues, your first call should be to your installer.

#### What causes a post-solar panel leak?

Exposure to weather conditions and UV radiation over time can cause sealants to degrade, leading to gaps that allow water to infiltrate and cause a post-solar panel leak. Regular inspection and maintenance of the sealants can help prevent this issue. Roof age and condition also impact the risk of a post-solar panel leak.

If you're short on time, here's a quick answer: The most common causes of water dripping from the overflow pipe are a faulty T& P valve, high water pressure, or a faulty thermostat. Try replacing the T& P valve, installing a pressure regulator, or adjusting the thermostat to stop the drip.

Note the season: Sometimes roof mounted solar hot water systems will leak water from the overflow valve. This generally happens in summer when the tank is too hot and the valve activates to release the super-heated water from the tank.
