What is China's first 100MW liquid cooling energy storage power station?

Kehua's Milestone: China's First 100MW Liquid Cooling Energy Storage Power Station in Lingwu. Explore the advanced integrated liquid cooling ESS powering up the Gobi,enhancing grid flexibility,and providing peak-regulation capacity equivalent to 100,000 households' annual consumption.

What is integrated liquid cooling ESS?

The integrated liquid cooling ESS is complicated,rather than an easy-peasy assembly,hence it requires an enterprise to be extremely capable of integration,and demands carefully selected batteries and components,as well as full consideration of safety,O&M,transportation etc.

What is a centralized energy storage converter (IP67)?

Meanwhile,the nuclear-grade 1500V 3.2MW centralized energy storage converter integration system and the 3.44MWh liquid cooling battery container(IP67) are resistant to harsh environments such as wind,rain,high temperature,high altitude and sand,ensuring a safe,reliable and advanced power station.

Which coolant should be used for high-power fast charging & Superfast charging?

However,for high-power fast charging and superfast charging,active liquid cooling that combines pumps and coolants (such as water and dimethyl silicone oil) needs to be used . In addition,the phase-change heat transfer technology of coolants also should be introduced as the charging power increases in the future [12,13].

What is the maximum power of a super-charging station?

The principle has been widely applied and recognized in fields such as helical-tube-type heat exchanger [35,36],and microchannel heat sinks [37,38]. Currently,the maximum power of super-charging stations can reach 500 kW,and the maximum current load on the charging cable core is 500 A (Endesa X Ultra-fast pantograph,as per Table 1).

How does liquid cooling affect 230 kV cross-linked polyethylene cables?

For example,Brakelmann and Anders compared influences of the two liquid cooling methods on the circuit capacityof 230-kV cross-linked polyethylene cables using a numerical model. They found that when the temperature of conductors is in the range of 50-85 °C,the direct cooling shows a better effect than indirect cooling.
