

In recent years, with the wide application of chargeable lithium-ion batteries (LIBs) in portable devices, electric vehicles and renewable energy storage devices, challenges have emerged regarding safety performance and environmental friendliness [[1], [2], [3]]. The conventional electrolyte used in LIBs is an organic liquid electrolyte (LE), which suffers from ...

Abstract Lithium-sulfur (Li-S) batteries have received widespread attention, and lean electrolyte Li-S batteries have attracted additional interest because of their higher energy densities. This review systematically analyzes the effect of the electrolyte-to-sulfur (E/S) ratios on battery energy density and the challenges for sulfur reduction reactions (SRR) under lean electrolyte ...

Wan, H. L. et al. Critical interphase overpotential as a lithium dendrite-suppression criterion for all-solid-state lithium battery design. *Nat. Energy* 8, 473-481 (2023).

According to the London Fire Brigade there was a fire from a lithium-ion battery purely from e-bikes or e-scooters every two days in 2023 in London. ii Research shows that, of those who have experienced an incident, around half of respondents are following this guidance, suggesting that many businesses are not prioritising safety around lithium-ion batteries.

The interface phenomenon causes a high impedance in the batteries and plays a critical role in the deterioration of battery performance, including (i) inferior solid-solid contact and large grain boundary between SSEs and electrode materials, (ii) formation of a lithium-deficient space charge layer between SSEs (e.g., oxides and sulfides based SSEs) and cathode ...
