Can a soldering iron contact a battery?

Do not allow the soldering iron to make direct contact with the bodies of the batteries. Proceed with the soldering quickly within 5 seconds while maintaining the iron tip temperature at about 350°C, and do not allow the temperature of the battery bodies to exceed 85°C. (Heat resistance BR type is 125°C)

How do you solder a battery?

Proceed with the soldering quickly within 5 seconds while maintaining the iron tip temperature at about 350°C, and do not allow the temperature of the battery bodies to exceed 85°C. (Heat resistance BR type is 125°C) Soldering with a dip-soldering bath can be used by condition but do not allow the temperature of the battery bodies exceed 85°C.

What is the temperature range of a soldering iron?

Soldering irons are designed to reach a temperature range of 200 to 480 °C (392 to 896 °F). Soldering irons are most often used for installation, repairs, and limited production work in electronics assembly. High-volume production lines use other soldering methods. Large irons may be used for soldering joints in sheet metal objects.
