SOLAR PRO. Lithium battery intelligent disassembly

Why is it difficult to disassemble electric vehicle batteries?

Due to the great difficulty of disassembling electric vehicle batteries and the small operating space part of the disassembly process, which makes it difficult for the robotic arm to operate, it is difficult to automate the disassembly process entirely.

What information do I need for a lithium ion battery disassembly?

If a disassembly of the modules down to cell level is planned in the future, further information about the cells, e.g., design (pouch, prismatic, cylindrical), weight, and dimensions, are required. As mentioned before, lithium-ion batteries are labelled with a "Li-ion" symbol.

What is the disassembly process of lithium-ion traction batteries?

Disassembly Process of Lithium-Ion Traction Batteries The disassembly of lithium-ion traction batteries after reaching their end-of-life(EoL) represents a promising approach to maximize the purity of the segregated material.

Can artificial intelligence improve the disassembly process for EV batteries?

In response to this pressing issue, this review presents a comprehensive analysis of the role of artificial intelligence (AI) in improving the disassembly processes for EV batteries, which is integral to the practical echelon utilization and recycling process.

Can AI improve battery disassembly operations?

AI-driven methods for planning battery disassembly sequences are examined, revealing potential efficiency gains and cost reductions. AI-driven disassembly operations are discussed, highlighting how AI can streamline processes, improve safety, and reduce environmental hazards.

What are the subtasks of disassembly compared to a lithium-ion battery?

Compared to the disassembly sequence of a lithium-ion battery, the subtasks of disassembly should be performed selectively based on the working abilities of workers and robots. Disassembly subtask assignment relies heavily on the evaluation of workers and robots.

This paper introduces an intelligent hybrid task planner designed for multi-robot disassembly and demonstrates its application to an EV lithium-ion battery pack. The objective is to enable multiple robots to operate collaboratively in a single workspace to execute battery disassembly tasks efficiently and without collisions.

Taking the intelligent disassembly of retired power battery pack as the research object, a virtual robotic disassembly system is constructed. The system consists of a multi-robot collaborative disassembly workstation built based on ABB''s virtual simulation platform-RobotStudio and external programs connected through its secondary development interface.
