

What is the lithium-ion battery safety bill?

Introduced on 29 July 2024, the Lithium-Ion Battery Safety Bill is a private member's bill aimed at enhancing the safe storage, use, and disposal of lithium-ion batteries, specifically targeting householders and battery energy storage systems (BESS).

What is a lithium-ion battery?

1.3 'Lithium-ion battery' should be taken to mean lithium-ion battery packs supplied for use with e-bikes or e-bike conversion kits, incorporating individual cells and protective measures that are intended to be charged either with the e-bike or separately.

What are battery safety requirements?

These include performance and durability requirements for industrial batteries, electric vehicle (EV) batteries, and light means of transport (LMT) batteries; safety standards for stationary battery energy storage systems (SBESS); and information requirements on SOH and expected lifetime.

Are lithium-ion batteries safe?

These guidelines mandate that lithium-ion batteries must contain a safety mechanism to address that risk. Producers and distributors of lithium-ion batteries must take the guidelines into account when assessing whether their product meets legal requirements under the General Product Safety Regulations 2005 (GPSR) in Great Britain.

What does the new lithium-ion battery Bill mean for local authorities?

The bill also includes provisions for criminal and civil liability for non-compliance. Disposal Regulations: Regulations will be introduced to improve the safe disposal of lithium-ion batteries, which have been the cause of fires in waste systems. Notably, the bill avoids placing additional financial burden on local authorities.

What is the battery manufacturing and technology standards roadmap?

With a mind on the overarching goal behind the roadmap recommendations to continue building an integrated, UK-wide, comprehensive battery standards infrastructure, supported by certification, testing and training regimes, and aligned with legislation/regulatory requirements; it is pro

The government has published new statutory guidelines for businesses producing and distributing lithium-ion batteries for e-bikes, as the latest step in tackling fires ...

Lithium-ion batteries are increasingly found in devices and systems that the public and first responders use or interact with daily. While these batteries provide an effective and efficient source of power, the likelihood of them overheating, catching on fire, and even leading to explosions increases when they are damaged or improperly used, charged, or stored.
