

Maintenance of solar street lights in winter

How to maintain a solar street light?

Pay attention to the dust on the panel surface, clean it if necessary. In addition to the cleaning and protection of the solar panels, the battery of the solar street light must be maintained too. 1. In situation of strong wind, heavy rain, hail, heavy snow, etc., measures should be taken to protect the solar battery modules to avoid damage.

Do solar street lights work in winter?

Solar street lights use solar energy as energy source. These devices are outdoors, which means they will be greatly affected by natural factors. After using for a long time, the solar panel is too dusty and often covered by snow in winter, causing the photoelectric conversion rate reduced and the charging as well as battery power are insufficient.

What should be done after installing solar street lights?

Therefore, after installing the solar street lights, personnel should be regularly organized to conduct detailed inspection on the solar panels in all aspects. This is also to keep the solar panels running in good working conditions for a long time, to ensure the normal use of the street lights, and to create more economic benefits.

Can a solar street light be repaired?

Actually, if there is any problem with the solar street lamp, it is best to find the manufacturer to repair it. If the warranty period has passed, then you should also look for a professional solar street light installer and maintenance personnel to check and solve the issue. Previous: City Street Lights Maintenance Issues an...

Are solar street lights a good investment?

Using solar street lights has many benefits, such as energy saving, environmental protection, safer and stability, and easy installation, etc. To extend the service life of solar street lights, in addition to ensuring quality during manufacturing and correct installation, follow-up maintenance is also very important.

How to check the condition of a solar panel?

Here are some tips to check the condition of the solar panel. 1. Check whether the panel is damaged, find the issue and replace it in time. 2. Examine the connection wire and the ground wire of the panel, to see whether they are in good contact or any falling off. 3. Have a look at the bracket, to know if it's loose or broken. 4.
