Is there a theoretical basis for power battery policy research?

In summary, the literature provides an important theoretical basis for power battery policy research. However, previous research is far from systematic and in-depth. First, this research focused more on analysis of the technology, while research on policy is still scarce.

What are the sections of the power battery industry policy?

Section 3 introduces the data source and research design. Section 4 describes the analysis of the power battery industry policy from the product life cycle perspective in four aspects: quantity, department, content and policy tools. Section 5 presents the conclusions and suggestions for policy improvement.

What should the government do after establishing the goal of power battery industrialisation?

Therefore, after establishing the goal of power battery industrialisation, the government should continue to pay attention to and proactively guide the maintenance of policy continuity. In addition, policy goals should not be changed repeatedly.

Why are Power Battery policies so complicated?

Because of their large number, policies for the power battery industry have become complicated. If policy elements are not reasonably designed and configured, certain negative effects might hamper the development of the power battery industry, leading to missed opportunities to guide and regulate the industry.

How to improve the life cycle of the power battery industry?

At the same time, it is necessary to fully consider the characteristics and attributes of each stage in the life cycle of the power battery industry and to strengthen the connection between each stage to promote the healthy development of the industry. Maintain policy continuity after setting policy objectives.

How do government policy tools affect the power battery industry?

The government prefers to use environment-side and supply-side policy tools to plan the development of the power battery industry, while demand-side policy tools have a certain traction effect on expanding market demand and improving market mechanisms.

An analysis of China's power battery industry policy for new... 1 3 The rest of this paper is arranged as follows: Section 2 presents the literature review. Section 3 introduces the data source and research design. Section 4 describes the analysis of the power battery industry policy from the product life cycle perspective in four aspects:

The battery strategy describes how we will build on our comparative advantage, scale up our emerging supply chain, and continue to secure internationally mobile investment.

The Chinese government attaches great importance to the power battery industry and has formulated a series of related policies. To conduct policy characteristics analysis, we analysed 188 policy texts on China's power battery industry issued on a national level from 1999 to 2020. We adopted a product life cycle perspective that combined four dimensions: ...

The new energy model, as seen in Fig. 5, aims to transform the current system into a distributed system, in which an agent that is connected to the grid has the possibility of providing energy, enabling the creation of micro-generators, in such a way that there is no such direct dependence as with current energy generation.

MITEI's three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids. Replacing fossil fuel ...

In the end, this paper proposes policy recommendations for the future development of China's NEV's battery industry from the perspectives of technology, market, and industrial chain.

The continuous progress of society has deepened people's emphasis on the new energy economy, and the importance of safety management for New Energy Vehicle Power Batteries (NEVPB) is also increasing (He et al. 2021). Among them, fault diagnosis of power batteries is a key focus of battery safety management, and many scholars have conducted ...
