What is a simple solar charger circuit?

Simple solar charger circuits are small devices which allow you to charge a battery quickly and cheaply, through solar panels. A simple solar charger circuit must have 3 basic features built-in: It should be low cost. Layman friendly, and easy to build. Must be efficient enough to satisfy the fundamental battery charging needs.

How does a solar charge controller work?

There is a switch between the solar panel and the battery and another switch between the battery and to load. Besides, it senses the battery voltage and panel presence. That's it in a very simple way. Check this block diagram of the Solar Charge Controller circuit. Here SW is the switch.

What is a solar charge and discharge controller?

The diagram below shows the working principle of the most basic solar charge and discharge controller. The system consists of a PV module, battery, controller circuit, and load. Switch 1 and Switch 2 are the charging switch and the discharging switch, respectively.

How to charge a 12V battery from a solar panel?

Here is the simple circuit to charge 12V, 1.3Ah rechargeable Lead-acid battery from the solar panel. This solar charger has current and voltage regulation and also has over voltage cut off facilities. This circuit may also be used to charge any battery at constant voltage because output voltage is adjustable.

How do you charge a solar panel without a battery?

Place the solar panel in sunlight. Check the battery voltage using digital multi meter. Circuit is simple and inexpensive. Circuit uses commonly available components. Zero battery discharge when no sunlight on the solar panel. This circuit is used to charge Lead-Acid or Ni-Cd batteries using solar energy.

What is the output voltage of solar battery charger?

Output Voltage -Variable (5V - 14V). Maximum output current - 0.29 Amps. Drop out voltage- 2- 2.75V. Solar battery charger operated on the principle that the charge control circuit will produce the constant voltage. The charging current passes to LM317 voltage regulator through the diode D1.
