What are the main features of photo-cell?

The main features of photo-cell include these are very small, low-power, economical, very simple to use. Because of these reasons, these are used frequently in gadgets, toys, and appliances. These sensors are frequently referred to as Cadmium-Sulfide (CdS) cells. These are made up of photo resistors and LDRs.

What are photocells called?

Photocells are also called by many other names including photoconductive cells, light-dependent resistors (LDR's), and photoresistors. They are variable resistors with an extremely wide range of resistance values (up to hundreds of orders of magnitude) that are dependent on the level of incident light.
